Requirement Document: Finance & Habit Pattern Finder

Topic 9

1. Document Overview

This document defines the requirements for creating a Finance and Habit Pattern Finder using persistent memory nodes in Google Opal.

2. Objective & Purpose Statement

Purpose Statement:

Enable learners to build and configure workflows within Google Opal that orchestrate AI reasoning, tools, and output integrations.

Primary Tasks:

1. Capture daily transaction details.
2. Read historical transaction data from a persistent Memory Node.
3. Analyze current transactions against history to identify spikes and trends.
4. Append and save updated transaction data back to the Memory Node.

3. Scope of the System

In-Scope (Functional Boundaries)

- Handling user financial inputs.
- Configuring Memory Nodes.
- Developing historical comparison prompts.
- Generating habit summaries.

Out-of-Scope (Excluded Features)

- Direct integration with real banking APIs (out of scope for this sandbox).
- Processing payments or transfers.

4. Input & Output Specification

Input Specification

Inputs include:

- Amount (numeric).
- Category (text).
- Description (text).

Output Specification

Output: Weekly insight recommendation displayed in the browser, with updated memory file saved.

5. System Configuration & Quality Requirements

Opal Environment:

Accessible via the web-based editor at opal.google or an equivalent Google Labs sandbox.

API Credentials:

Active connections to Google Drive and required external tools (e.g., Web Search and Discord Webhooks), as applicable to the configured workflow.

Grounding Compliance:

High reliability and zero-hallucination thresholds where specified.

6. Project Deliverables

The project comprises the following deliverables:

6.1 Project Explanation Video

A high-resolution screen-recorded walkthrough demonstrating the completed Google Opal workflow, including:

- Node layout on the canvas.
- Configuration of triggers.
- Testing inputs in the preview pane.
- Showing the final output in Google Docs, Sheets, or Discord, as applicable.

6.2 GitHub Public Repository

A public repository containing:

- `prompts/` – folder containing prompt text files.
- `concept_guide.md`
- `requirement_document.md`
- `implementation_plan.md`
- `testing_plan.md`
